

AK · JobNest — Presentation Script

Spoken narration for the project explanation video · ~2–3 minutes

SCENE 1 — Intro (0:00 – 0:15)

Visual: On screen: AK logo → “AK · JobNest” title.

*Hello everyone. This is **AK · JobNest** — a full-stack Job Portal I built to connect **job seekers**, **employers**, and a secure **admin** on a single platform.*

SCENE 2 — The Problem (0:15 – 0:35)

Visual: On screen: Three role cards.

*Job platforms usually do one side well — either seekers or employers. JobNest gives **all three roles a dedicated workspace**: seekers find and apply to jobs, employers post and review applicants, and a single admin oversees the whole system with full audit visibility.*

SCENE 3 — Tech Stack (0:35 – 0:55)

Visual: On screen: Tech stack pills.

*The frontend is built with **React 19** and **TanStack Start**, styled with **Tailwind CSS** and **shadcn/ui**. The backend is a **Spring Boot** REST API with **JWT authentication**, backed by **PostgreSQL**. Live updates are delivered through **WebSockets**.*

SCENE 4 — Job Seeker Workflow (0:55 – 1:25)

Visual: On screen: Seeker dashboard / Apply flow.

*A job seeker registers, logs in, and lands on the jobs page. They can search and filter postings, open a job, and apply with one click. Every application moves through a clear status pipeline — **Applied** → **Reviewed** → **Shortlisted** → **Hired or Rejected** — and they receive a live notification whenever their status changes.*

SCENE 5 — Employer Workflow (1:25 – 1:50)

Visual: On screen: Employer dashboard.

*Employers have their own dashboard. They can **post new jobs**, view all applicants for each posting, and update the application status. Their company profile is editable so candidates always see up-to-date information.*

SCENE 6 — Admin & Security (1:50 – 2:25)

Visual: On screen: Admin dashboard tabs.

*Now the most important part — the **Admin**. The admin role is **hard-locked to a single email**, admin@jobnest.com, both in the backend and the registration UI. No one else can ever become admin. The admin dashboard has four tabs: **Users**, **Jobs**, **Applications**, and a read-only **Audit Log**. Every administrative action — delete, deactivate, role change — is recorded with the actor,*

target, and timestamp.

SCENE 7 — Wrap-up (2:25 – 2:45)

Visual: On screen: Thank-you outro.

*So that's **AK · JobNest**: a clean, role-based, end-to-end job portal with secure authentication, real-time notifications, and a fully auditable admin panel. Thank you for watching.*

Speaking Tips

- Keep pace calm — about 130 words per minute.
- Pause briefly when the scene changes on screen.
- Emphasize bold words: **AK · JobNest**, **three roles**, **admin**, **audit**.
- Total runtime targets the 20-second intro video plus your screen recording.
